## Polyethylene wax powder

### S-338

#### Performance and use:

- Less gloss reduction
- High smoothness
- Good friction resistance
- Excellent adhesion resistance
- Excellent compatibility with the system

#### Product specification:

Model number	S-338
appearance	White powder
Particle size	6 microns (D-50)
Density (g/cm <sup>3</sup> )	0.94
Melting point °C	120
hardness	<1dmm

system	Polyethylene wax powder can be applied to a variety of high-gloss coatings and a variety of offset printing, gravure ink system, suitable for epoxy floor paint system, can also be applied to powder coatings added with wax powder
ingredient	Micro powder modified polymer polyethylene

**Packing specification:**25kg paper bag packing
