

PP surface coated with excellent adhesion resin

P-1900

Features and advantages:

- 1, excellent adhesion effect: polypropylene plastic and polyurethane, acrylic, amino, epoxy or alkyd resin coating has excellent adhesion. P-1900 is often used as an adhesion promoter in polyolefin coatings.
- 2, easy construction: P-1900 is used in the color primer of polyolefin substrate, without any corona, flame and solvent cleaning pretreatment. Excellent adhesion at low baking temperature. Good compatibility with other resins, good flexibility.
- 3, multi-substrate adhesion: P-1900 can also establish structural adhesion between polypropylene and other materials, such as aluminum foil, fiber paper, polyester and other plastics.
- 4, ink, paint, adhesive to promote undercoat or interlayer adhesion.

Product specification:

appearance	Yellow particle
Solid content	100%
Viscosity (30% toluene solution)	10-100 (mpa. s 25°C)

Application field:

- (1) Plastic composite binder
- (2) Bumper polypropylene binder
- (3) PP/PET/ABS/PVC coating binder

-
- (4) Heat-resistant ink binder
 - (5) anti-corrosion coating binder
