

Oleophilic environment-friendly wetting agent

RK-8211

Features and advantages:

RK-8211 is a kind of environmental protection wetting agent for water-based coating, has good wettability for various color fillers, and has good anti-seepage color anti-hair effect in water-based coating.

RK-8211 does not contain alkyl phenol polyoxyethylene ether, in line with the latest EU environmental regulations, the main chemical composition is a special mixture of patent protection, can effectively improve the compatibility of various color fillers and water phase, suitable for a variety of water system wetting.

Product specifications:

appearance	Clear liquid
PH	6.5±1.0 (10% aqueous solution)
Valid copy of	100% (The theoretical value)
HLB	13
Surface tension	30 (25°C, 1% aqueous solution)

Recommended dosage: add 0.05~1.0% (finished product form) to the total amount of paint, the specific dosage should be subject to the experiment

Usage: In order to use easily, RK-8211 added antifreeze ingredients, above 5°C will not solidified, can be directly added; If the temperature is too low, it will lead to the solidification of the product, it is recommended to use hot water or heating before adding, adding directly under the solidification state will greatly reduce the efficiency of the product.

Packing: 25/200kg plastic drum or packing according to customer's requirement.

Storage: the product should be sealed and placed in a cool, dry and ventilated place. If it cannot be used all at once, tighten the lid after use to prevent volatilization of active ingredients.
