

Defoaming agent

RP-6025

Product features and points:

RP-6025 is a non-silicon defoamer with high cost performance. It is suitable for improving the fluidity of solvent-based and non-solvent-based systems, as well as having strong anti-bubble, defoaming and defoaming effects. At the same time has good compatibility, in the system is not easy to produce shrinkage hole, use performance is safe.

Product specification:

appearance	Light yellow viscous liquid
Active component	50%
composition	polyolefin

Application: polyurethane, polyamide, nitrocellulose, unsaturated polyester resin, epoxy and other oil-based systems.

Recommended dosage: For the total amount of 0.1 ~ 1.0%, please test the best dosage; After addition, the mixture should be evenly mixed under high enough shear force, and can be added before and after grinding.

Packaging: 20kg/rubber drum, 180kg per barrel.
