

Polyether modified polysiloxane leveling agent

RF-7333

Features and advantages:

RF-7333 is 100% active content of polyether modified polysiloxane leveling agent.

- 1, organic silicon surface additives.
- 2, by reducing the surface tension of the coating to improve the wettability of the substrate.
- 3, increase surface lubrication and scratch resistance and anti-adhesion, improve leveling, improve gloss, prevent Benard vortex.

Product specifications:

appearance	Transparent to yellowish liquid
Active content %	>97
solvent	-
The proportion of	1.05±0.05g/ml (25°C)
Flash point	>100°C

Application: suitable for solvent - based, solvent - free, UV system and water - based coatings.

Recommended dosage:

Total formula 0.05-0.3%;

It is 0.3-1% in UV and water systems

Usage: generally added in the paint phase.

Packaging: 25KG/200KG non-recycled blue plastic drum. Cover tightly if the product is not completely used.

Storage: away from fire, and placed in a cool and ventilated place; It lasts for 24 months under normal storage conditions.
